

# Finding your IP address

The IP address and hostname of your service can be found by clicking on the Access link in the sidebar

After clicking the link a new page will load with the details for your server.

Username

This is the SSH/sFTP username for your service.

Hostname	The hostname will always point to the IP address of your server and gives you an easy to remember name to use when connecting or sharing your server details.
IP Address	This is the numerical IP address of your service, if your service is transferred or recreated this will likely change so we recommend you use the hostname when connecting to your server.
Port	This port is only needed if you are connecting to your service via SSH or sFTP so can be ignored most of the time

You will also find the SSH/sFTP key on the access page for the minecraft and root user, you can read more about these on the following page

<https://www.creeperhost.net/wiki/books/general-information/page/how-to-sshsftp-into-your-server>
