

Rebooting your service

There may be times where you need to reboot your service, such as if its not behaving like you expect it to or if there are issues such as high memory usage but none of your game servers are running.

To reboot your service login to the CreeperPanel then make sure you are on the overview page by clicking on Overview in the sidebar

Next click on the orange button in the top right of the page, this will tell your service to reboot

The screenshot shows the CreeperPanel dashboard for a user named 'playatch' located in 'MintVillager, Grantham, England'. The interface is dark-themed with green accents. On the left, there is a sidebar with a search bar and two main sections: 'GAMES & SOFTWARE' and 'SERVICE'. Under 'GAMES & SOFTWARE', there are two items: 'Default' (Minecraft: Java) and 'Satisfactory', both with red status indicators. Under 'SERVICE', there are several menu items: Overview, Community Schemas, File Manager, Resize, Access, Cloud Saves, Scheduler, Integrations, Sub-accounts, Firewall, and Change Location. The main content area is divided into several sections. At the top, there is a 'VPS STATUS' section with four cards: CPU (1.0%), RAM (0.5%), DISK (23.4%), and NET (0.1Mbps). A green box highlights a small icon in the top right of this section. To the right of the VPS status is a 'YOUR ACCOUNT' section with four cards: Open Tickets (0), Credit Balance (£0.00), Unpaid Bills (1), and Your Suggestions (0). Below these is a 'QUICK LINKS' section with five items: 'View our CreeperPanel getting started guide', 'Get help with your service', 'Suggest a new feature or report a bug', 'Refer new users and earn rewards!', 'View our tutorial videos', and 'View the CreeperPanel changelog'. On the far right, there is a small 3D character icon.

After a couple of minutes your service should be back up and running, if the panel is not displaying any system statistics for you try refreshing the page or logging out and back in.
