

Retrieving modpack logs from the CurseForge app

Navigate to the Minecraft section of the CurseForge app and right-click on the modpack you want to get the logs for and select `Open Folder`

Double click on the `logs` folder to open it and then right-click on a file called `latest.log` or `fml-client-latest.log` and click on `Edit` or `Open with` > `Notepad`

Right-click then click on **Select All** then right-click again and click **Copy**

The image shows a Notepad++ window titled "latest.log - Notepad++". The menu bar includes File, Edit, Format, View, and Help. The main text area displays a log file with timestamps from 00:52:08 to 00:52:09. The log contains various status messages, including warnings about unsigned plugins and recommendations to use separate jars for mods. A right-click context menu is open over the log text, showing options like Undo, Cut, Copy, Paste, Delete, Select All, Right to left Reading order, Show Unicode control characters, Insert Unicode control character, Open IME, Reconversion, and Search with Bing... The status bar at the bottom indicates "Ln 25, Col 39", "100%", "Windows (CRLF)", and "ANSI". A second Notepad++ window is partially visible in the background, showing a similar log file with a context menu also open.

Go to <https://pste.ch/> and paste the log by right-clicking in the empty area and click Paste or press CTRL+V then click the Save button and share the URL with our support team
