# Installing Oxide/uMod

Oxide/uMod is a mod/plugin loader for Rust servers that allow server owners to install plugins such as whitelists to their servers.
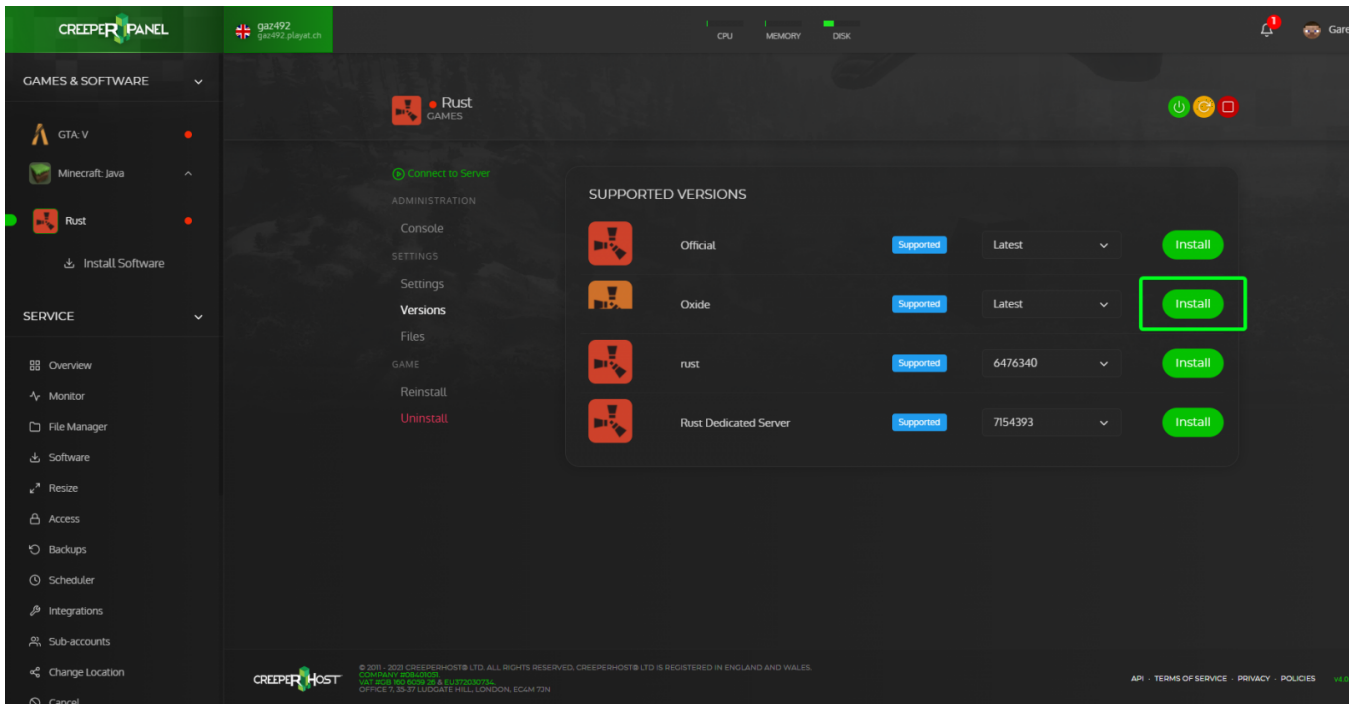

1. Stop your Rust server by pressing the red stop button in the top right.

2. Click on Versions

3. Click on the Install button next to the Oxide version and wait for it to install.

4. Once it's finished installing start your server up.
5. You can add mods/plugins to your server by going to the Files page and navigating to the `oxide > plugins` folder then dragging and dropping the plugins into the file manager to upload them.
